Library Management System
Group-17

TEAM MEMBERS:

202112084 – PARTH KANERIYA
202112094 – UTTAM DOBARIYA
202112112 – APOORV JAIN

OVERVIEW:

This is a Library Management System project in which we have shown a small prototype of library. In this project there are 2 users student and admin. Functionalities of Students and admin are described below…

For the users without login/register wants to visit our website, (s)he can view only the books but cannot issue that book, Apart from this user can see the about us page.
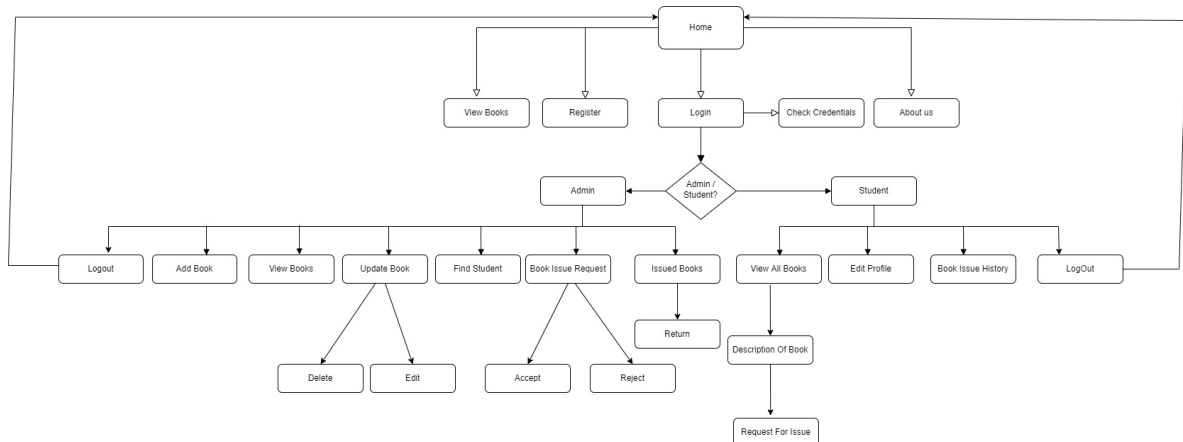

STUDENT SIDE:

- Once the Student is registered (s)he can go to **ViewBook** section to see the books available or not.
- Student can check the description of book through **Description** section.
- From **Issue request** section they can request to admin to issue the book.
- Student can see the issue book history of his/herself from **issueBookHistory** section.

ADMIN SIDE:

- Admin can login their self from **LOGIN** section.
- Admin can View books from **ViewBook** Section. As well as how much copies are remaining there in the library and all that data….
- Admin can see the request for books which student was requesting for issuing the book in **ViewRequest** section.
- Admin can add books from **AddBook** section.
- Admin can edit book from **EditBook** section.
- Admin can manage the data of books through the **returnBook** section.
- Admin can View all students who have issued books from library. And manage the total available copies of books
